

# Do Pheromones Work: Interesting Information about The Use Of Human Pheromones

Human pheromones are chemicals in the body that are secreted to be able to appeal to members of the opposite sex. Much research has been done into the use of pheromones within different aspects, such as perfumes, in order to ease the process of finding a soulmate. Since the discovery of those chemicals back in 1959, they have been studied and researched by many scientists as well as students with regard to rewards as well as down sides. It is commonly believed that the signals these chemicals are producing and transmitting are primarily noticed in humans by the sense of smell, although this theory is being disputed. Scientists and researchers still search for the exact region, when there is one, of the transmission of these chemical indicators.

## The Just What and the Reason Why of Pheromones

Pheromones are hormones that draw us on a subconscious level in order to members of the opposite (or same) sex. To maintain the human race recreating the actual best species feasible, we are actually drawn to people all of us would be best mated with biologically. This clarifies why we are extremely interested in somebody even when it makes no logically feeling.

- Love is hard enough to find but what if you have a hard time attracting anyone in any way.
- All of us deserve love but how will you ever think it is in the event that you can't turn a single head the right path.
- You wonder why you can not find love and your self-esteem strikes rock bottom.

*Since pheromones have been touted as an aphrodisiac and suppliers of some fragrance companies have claimed they captured the essence and put it in a bottle, there are no proven results that show that people turn out to be more sexually appealing by using it.*
